Nursery Grown Wildflowers

Alumroot

Alumroot

45c ea.

Interesting, short stemmed foliage, forms splendid ground cover. Inconspicuous flower rising on long stem appears between May and August. Native of dry woodland from Canada to Alabama.

Anemone, Rue

35c ea.

This fairy-like, white flower, appearing from March to May, is so dainty it would seem that it must perish in the sharp winds of late spring, but is a very hardy and an extremely satisfactory plant. Grows naturally in the deep woods from New Hampshire to Minnesota.

Anemone, Rue

Anemone, Tall; Thimbleweed

35c ea.

This beautiful plant deserves great popularity. Its dainty, white blossoms appear during May, June, July and August. It grows naturally in open, dry woods or thickets from Canada to South Carolina.

Arbutus

Arbutus, Trailing; Mayflower

75c ea.

A rare plant that has fascinated flower lovers for generations. It must have extremely acid soil. Grows close to the ground and ultimately forms a solid mat of rich, dark green leaves which are evergreen. The shell-pink blooms appear in April and May. Canada to Florida. Difficult to raise.

Anemone, Tall

Arrowhead

35c ea.

One of our most beautiful aquatic plants. White blooms appear from July to September. Long popular for shallow pools and lily ponds.

Aster, New England

Aster, New England

35c ea.

This magnificent, rich purple aster makes a grand show in the moist meadows and bogs blooming from late August to October. Is native from Canada to Alabama, west to Colorado. Grows 3 to 3½ feet high.

Arrowhead

Baneberry, Red or White (berries)

50c ea.

A handsome plant throughout the summer. Dainty, lace-like, white blooms appear April to June and are later followed by bright fruit. Native of woodlands from Canada to Pennsylvania.

Bellwort, Large-flowered

45c ea.

This fascinating plant usually grows 6 to 18 inches high. The bell-shaped flowers are a rich yellow and appear during April and May. Native of the rich woodlands from Canada to Georgia.

Bellwort

Baneberry

Nursery Grown Wildflowers

Bergamot

Bellwort, Sessile-leaved

45c ea.

This rather rare, delicate, nodding, yellow bell-shaped flower grows best along stream banks where there is occasional silt deposit. Flower stem grows 4 to 12 inches high from Canada to Georgia and blooms usually in May.

Sessile-leaved Bellwort

Bergamot, Wild

45c ea.

Usually grows about 2 feet in height. Attractive, pale, lavender blooms appearing June to September make a beautiful display on dry, open hillside. Should not be planted near cultivated garden. Native from Maine to Florida.

Bloodroot

Bittersweet

50c ea.

Very attractive, woody vine bearing ornamental, orange scarlet berries in the fall. Native of eastern United States, will live in woodland shade but grows more luxuriantly and bears more prolifically in the open sun.

Bittersweet

Bloodroot; Puccoon-root

35c ea.

This spring favorite is a native of rich, wood soil from Canada to Florida. Its 1 to 1½ inch, white blooms rising above broad, light green leaves are an addition to any garden. It blooms in April and May.

Butterfly Weed

Buttercup, Swamp or Marsh

45c ea.

One of the most colorful of our bog plants. Luxurious foliage. Golden yellow. Intermittent blooms April, May, June, July. Native of swamps and wet meadows from Canada to Georgia.

Swamp or Marsh Buttercup

Butterfly Weed; Pleurisy Root

50c ea.

One of the most spectacular of all wild flowers. Plant 1 to 3 feet high. Brilliant orange blooms appearing during July, August, and September. Native of dry, open fields from Maine to Florida.

Clematis, Wild; Virign's Bower

50c ea.

Fascinatingly dainty vine, is very hardy. Blooms profusely and grows rapidly. Flowers July, August, September. Prefers full sun and is native from Canada to Georgia.

Wild Clematis

Clintonia, Yellow; Dogberry

50c ea.

Low plant, seldom growing over 12 or 15 inches in height. Beautiful, thick, green leaves. Small, yellow flowers, followed by blue berries, appear in May and June. Is native from Canada to North Carolina.

Yellow Clintonia

Nursery Grown Wildflowers

Cohosh, Blue

45c ea.

Usually 1 to 2½ feet high. Shallow rooted. Excellent ground cover in woodland. Will form thick mats on top of huge rocks. Dainty, blue flowers appear in April and May. Native from Canada to South Carolina.

Columbine, Wild; Rock Bells

50c ea.

Colorful and dainty, charming combination of red flowers tipped with yellow and delicate, small, light green leaves. Very satisfactory. Native of rocky woodlands from Canada to Florida.

Dutchman's Breeches

35c ea.

A delicate plant with dainty, fernlike leaves and graceful white blossoms which appear in April and May. Native in the rich woodlands from Canada to North Carolina, westward to Missouri.

Flag, Larger Blue

50c ea.

This splendid violet-blue iris blends beautifully with a natural setting. Plant stands 2 to 3 feet in height. It is a native of swamps, bogs, and wet meadows from Canada to Florida.

Foam Flower; False Miterwort

45c ea.

One of the most charming ground covers for deep shade. Dainty white flowers on stems 1 to 4 inches high. Grows naturally in the deep, rich soil of damp woods from Canada to Florida.

Forget-Me-Not; Mouse-Ear; Scorpion Grass

35c ea.

Small plant with dainty, blue flowers which appear May to July. Native along slow streams, in bogs, and wet meadows from Canada to Tennessee.

Galax

50c ea.

An unusual ground cover for shade and partial shade. Fascinating, rounded glossy leaves. Evergreen foliage changes color in the fall. Flowers creamy white spike. Blooms early summer.

Gentian, Closed Blue or Blind

50c ea.

This admirable plant, 2 to 4 feet high, has deep, rich blue flowers which appear in August, September and October. Native of wet meadows from Canada to Georgia.

Geranium, Wild; Wild or Spotted Crane's Bill

35c ea.

The Wild Geranium, with its deeply indented leaf and its lavender, pinkish bloom, always seems to inject just a little gayer note of springtime into the intimate, shady garden. Native of rich woodlands from Maine to Georgia.

Columbine

Dutchman's Breeches

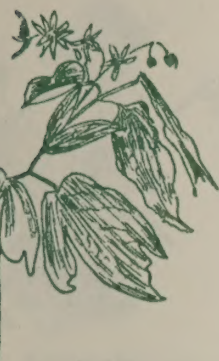

Foam Flower

Galax

Wild Geranium

Blue Cohosh

Larger Blue Flag

Forget-Me-Not

Blind Gentian

Nursery Grown Wildflowers

Wild Ginger

Ginger, Wild or Indian

35c ea.

Excellent ground cover for rocky, shady bank or rocky stream bank beneath woodland shade. Inconspicuous, dark red flowers appear May and April. Native of rich wood soil from Canada to North Carolina.

Heartleaf, Southern Wild Ginger

60c ea.

Exquisite, glossy leaves, resembling a heart shape. Prefers woodsy soil and protected exposures. Blooms are similar to Wild Ginger, mentioned above, but are larger. Native from Virginia to Georgia mountains.

Hepatica

Hepatica

45c ea.

Leaves, 2 to 2½ inches from the ground, last well through the season and often most of the winter. Delicate blue or pinkish-blue blooms appear above the leaves in March and April. Native of the deep woods from Canada to Florida.

Herb Robert

Herb Robert

45c ea.

Small bright purplish-red flowers, dainty, graceful foliage. Blooms appear in late spring or early summer. Is native of the moist rocky woodlands, Canada to Pennsylvania, westward to Missouri.

Indian Cucumber Root

Indian Cucumber Root

45c ea.

Attractive leaves, whorled on slender stem, 1 to 2½ feet high. Small, yellow flower appears May and June, followed by dark blue fruit. Native of moist woods throughout eastern United States.

Indian Pipe

Indian Pipe; Corpse Palnt

50c ea.

A ghost-like flower. Stem, leaves, and bloom are white. Appears June to August in deep woods throughout the United States. Lives on decayed, organic matter. Available only in July and August. Difficult to grow.

Iris Cristata

Iris Cristata

45c ea.

Justly prized dwarf creeping iris. Light blue flower appears April and May. Native of the mountains of Virginia, Kentucky and the Carolinas.

Jack-in-the-Pulpit

Jack-in-the-Pulpit

35c ea.

An old favorite beloved by youths and parents alike. Showy green and brown striped hood appears in June followed by a magnificent cluster of shining, red berries. Native of moist woods throughout eastern United States.

Jacob's Ladder, American

50c ea.

Flowers, mauve blue, appear May, June, and July. Grows in loamy soil throughout eastern United States.

American Jacob's Ladder

Nursery Grown Wildflowers

nk Lady's-slipper

Joe Pye Weed; Purple Boneset

35c ea.

A pinkish-purple haze over the meadow when in bloom during August and September, 3 to 6 feet high. Extremely decorative for open, moist ground not in immediate vicinity of more delicate garden. Native throughout eastern United States.

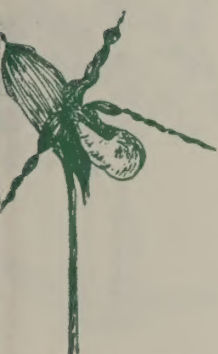

Joe Pye Weed

Lady's-slipper, Pink

75c ea.

Matchless orchid-pink, this bloom appears in June. Requires very acid soil, either sandy or rocky. Native of woodlands, Canada to North Carolina. Tricky to grow.

low Lady's-slipper

Lady's-slipper, Showy

\$1.50 ea.

Pink and white bloom of rare charm. Flowers appear June and July. Native of swamps and open woods, Canada to Georgia, westward to Minnesota. Tricky to grow.

Showy Lady's-slipper

Lady's-slipper, Yellow

\$1.25 ea.

Gorgeous bit of sunlight from the sky caught in each yellow bloom. Flowers appear May and June. Native of rich, moist woods, Canada to Alabama, westward to Nebraska. Tricky to grow.

Turk's Cap Lily

Lily, Philadelphia

50c ea.

This stunning lily is one of the most spectacular blooms of the deep woods or open hillsides. Grows 1 to 3 feet in height. Reddish-orange flower appearing in July. Native of woods, Maine to North Carolina.

Philadelphia Lily

Lily, Turk's Cap

50c ea.

One of the gayest lilies and a profuse bloomer, 6 to 8 feet tall. Excellent for shade or sun. Native of eastern United States.

Wild Yellow or Canada Lily

Lily, Wild Yellow, Canada or Nodding

50c ea.

4 to 6 stunning deep yellow flowers from a single stalk rising 2 to 5 feet high, blooming in July and August. Native of bogs and wet meadows, Canada to Georgia, westward to Minnesota.

Blue Lobelia

Lobelia, Blue or Cardinal

50c ea.

Exquisite flowers. 1 to 2 foot spike appears for a 3 week period during July, August, September and October. Prefers deep rich soil and is found throughout the United States.

Lousewort; Wood or Head Betony

45c ea.

Yellow and brown, chrysanthemum-like flowers appearing April, May, and June. Partially parasitic. Grows naturally in deep woods occasionally throughout the eastern United States.

Lousewort

Nursery Grown Wildflowers

Marsh Marigold

Fall Meadow Rue

Virginia Cowslip

Partridge Berry

Pitcher Plant

Marigold, Marsh; Cowslip

35c ea.

The English cousin of this charming golden flower is known on the other side as the "King's Cup." Belongs at the shady end of your pool. Native of bogs from Canada to Carolina.

May Apple; Wild Mandrake

35c ea.

An attractive ground cover for heavily wooded hillside. Large, decorative leaves almost hiding white blossoms which appear in May and June followed by an edible fruit. The root is poisonous. This highly valued medicinal plant is native of moist woods, Canada to Florida.

May Apple

Meadow Rue, Early

45c ea.

The dainty foliage of this plant is an asset to any spring garden. The blooms are an inconspicuous yellow-green and appear in April and May. Native along wooded stream banks, Maine to Alabama.

Meadow Rue, Fall

45c ea.

Huge, snowy white, fluffy balls of blooms from July to September borne high on graceful stems with a multitude of dainty, silvery green leaves make this charming plant a sort of fairy green of the summer wild garden. Native of bogs and wet meadows, Canada to Florida.

Early Meadow Rue

Martensia, Virginia Cowslip

50c ea.

This extremely popular old favorite is ever beautiful. Its blue flowers, which turn pinkish-purple with age, appear in April and May and form a charming contrast with the large, delicate green leaves. It is a native of open, wet meadows from New York State to South Carolina. The foliage disappears. So this plant should never be planted in an exclusive bed.

Showy Orchis

Orchis, Showy

75c ea.

Dainty, decorative, small orchid growing only 4 to 12 inches high. Purple and white flowers rising from thick, green leaves appear May and June. Native of the rich woodlands, Canada to Kentucky, westward to Missouri. Tricky to grow.

Partridge Berry; Twinberry; Squawberry Sods

45c ea.

An ideal evergreen creeper, flowers, waxy white, blooming in April, May, June, followed by bright red berries. Native of the woods, Canada to Florida.

Phlox, Blue

35c ea.

Light blue flower, 2 to 8 inches high, appears July to September. Should be planted in drifts on gentle wooded slopes. Native from Pennsylvania to Florida westward to Kansas.

Blue Phlox

Pitcher Plant; Sidesaddle Flower (Insectivorous)

50c ea.

More interesting than beautiful, but with showy, reddish-brown blooms and pitcher green and brown leaves. Native of wooded bogs, Canada to Florida.

Nursery Grown Wildflowers

Rattlesnake Plantain

Quaker Lady; Bluets

35c ea.

Delicate, light blue flower is one of the joys of May. Prefers open wood and grassy slopes. Is native from Canada to Georgia and westward to Missouri.

Rattlesnake Plantain

75c ea.

Beautiful evergreen, orchid, pale green and white leaves make this plant a favorite the year round. Inconspicuous, whitish blooms appear in July and August. Native of dry woods, Maine to Florida, westward to Minnesota.

Sarsaparilla, Giant

50c ea.

The rich, dark purple berries gleaming against the vivid green foliage of this plant make it a joy of the late summer woods. Delightful flower clusters appear earlier but are not so showy as the fruit.

Shooting Star

50c ea.

Charming, orchid-purple flower, with yellow center rising from a rosette of flat, green leaves. Native of moist, shaly banks from Pennsylvania to Georgia.

Shortia

60c ea.

Excellent ground cover, waxy green leaves, striking white flower appearing April and May. Requires shade. Native of wooded mountains of the Carolinas.

Skunk Cabbage

35c ea.

The first bloom of spring, the actual flower is hidden beneath the gaily mottled, yellow, brown, green, and red hood. Large light green leaves follow the blossom. As the hood decays, an objectional odor is given off. The odor does not carry far and the plant is decorative and useful in some locations.

Snakeroot, Black; Black Cohosh

45c ea.

An extremely desirable plant 3 to 8 feet high. Handsome, large, divided leaves, about which in July and August appear a tall plume of snowy white blooms. Native Maine to Georgia, westward to Wisconsin.

Solomon's Seal, True

35c ea.

Fascinating plant, grows 1 to 3 feet high. Small, yellow-greenish blossom appears in May and is followed by charming, dark blue berries. Native of rich woodland from Ontario to Florida.

Solomon's Seal, False; Wild or False Spikenard

35c ea.

One of the most beautiful and most satisfactory of the wild flowers. Handsome foliage and stunning plume of white flowers appearing May and June followed by handsome blue berries. Native of rich woodlands, Canada to North Carolina, westward to Wisconsin.

Solomon Seal, Giant

50c ea.

Tall, arched stem with drooping greenish-white flowers which appear in June and July. Dark blue pulpy berries. Found in shaded areas in the Eastern United States.

Bluets

Giant Sarsaparilla

Shortia

Black Snakeroot

False Solomon's Seal

Shooting Star

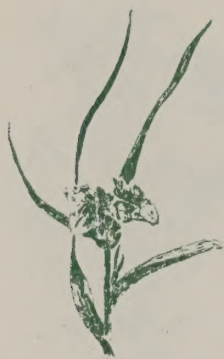

Skunk Cabbage

Solomon's Seal

Nursery Grown Wildflowers

Spiderwort

Spiderwort, Spider Lily 50c ea.

Unusual, beautiful, iris-like plant. Blooms, an exquisite purplish-blue, appear June, July, or August. Thrives best in rich soil of woodlands. Native from New York to Virginia.

Spring Beauty, Carolina or Wide-leaved 35c ea.

Very delicate, pinkish-white flower. Makes a beautiful spring ground cover for moist woodlands. Native from Canada to North Carolina.

Spring Beauty

Trillium, Nodding; Nodding Wake-Robin 35c ea.

White flower drooping beneath the large leaves appears May and June. Grows in rich, wet woods from Canada to Georgia.

Trillium, Painted; Painted Wake-Robin 35c ea.

An astonishingly beautiful white flower splashed with magenta rises above three dark green leaves. Blooms in May and is a native of the cold, damp woods from Canada to Georgia.

Nodding Trillium

Trillium, Red; Wake-Robin or Birthroot 35c ea.

Rich, deep reddish-purple flower above three large leaves. Blooms in May or June in woodlands from Canada to North Carolina. Flowers have an unpleasant odor as they fade so are not desirable for house plants.

Trillium Stylosum 35c ea.

Delicate, shell-pink bloom appears above dark green leaves usually in May.

White Trillium

Trillium, White 35c ea.

Beautiful, white, lily-like flower rising above three large, dark green leaves. Blooms in April or May and is native of the deep, rich woods, Canada to North Carolina.

Trillium, Yellow 35c ea.

Low mottled leaf. Lemon-yellow bell-like flowers appear in April and May. For woodland or rock garden areas.

Trumpet Vine

Trumpet Creeper; Trumpet Vine 75c ea.

Rapid growing and most decorative vine. Orange, trumpet-like flowers appear in midsummer. Native of southeastern United States.

Turtlehead; Snakehead 50c ea.

Stately, pinkish-white flowers sway on a 1 to 4-foot stem. Resemble turtle heads in shape and bloom during July, August, and September. Is a handsome addition to any wet woods or stream bank. Native from Canada to Florida.

Turtlehead

Nursery Grown Wildflowers

Violet, Bird's Foot

35c ea.

Velvety, lilac-purple flowers with orange centers blooming May and June. Leaves deeply cut differing from other violets. Native, open woods and dry, sandy fields from Massachusetts to Florida.

Bird's Foot Violet

Violet, Blue

35c ea.

The old, familiar, favorite, round-leaved, blue violet. Excellent ground cover for shade or sun. Native in deep, rich soil of eastern United States.

Blue Violet

Violet, Canada

35c ea.

Dainty, white flowers with bright yellow centers appearing May, June or July. Native of mountainous woodlands from Canada to South Carolina.

Dog's-tooth Violet
Trout Lily

Violet, Dog's-tooth; Trout Lily

35c ea.

This violet is actually a member of the lily family. Interesting, mottled leaves. Yellow flower appearing in April and May. Native in wet woods and along shady stream banks from Canada to Florida.

Canada Violet

Violet, Yellow

35c ea.

Stunning, shining yellow blooms above rich green leaves appear May and June. Native of the moist woods from Canada to Georgia.

Virginia Creeper

Virginia Creeper

35c ea.

Rapid growing vine, gorgeous autumn foliage. Thrives in dense shade or open sun. Native of eastern United States.

Yellow Violet

Wintergreen, Creeping or Spicy; Checkerberry Sods

45c ea.

Beautiful, low, evergreen creeper with white drooping flowers appearing June to September. Delicious, bright red berries and edible foliage. Grows well near or under evergreens. Native of woodlands from Canada to Georgia.

Spotted Wintergreen

Wintergreen, Spotted

35c ea.

Charming evergreen, dark reddish-green leaves veined with white. Lovely clusters of white, bell-shaped flowers appear in July. Native of dry woods from Canada to Georgia.

Creeping Wintergreen

Wildflowers are fascinating — because of their almost unexpected and impromptu appearances throughout the growing season. They have a delicate and subtle beauty all of their own.

Nursery Grown Native Ferns

Beechfern

45c ea.

This attractive fern prefers the cool moisture of beech shade and grows naturally from Canada to North Carolina.

Beechfern

Christmas Fern

35c ea.

Justly one of the most popular of all ferns. It retains its fronds well into the winter and often until the new fronds begin to uncurl in the spring. Prefers the deep, rich soil of heavily wooded slopes, grows naturally from Canada to Florida westward to Wisconsin and Texas.

Christmas Fern

Cinnamon Fern

50c ea.

Grows 2½ to 3 feet in height. Fronds form beautiful, light green cone. Bears its spores on separate fronds and receives its name from their reddish brown color. Prefers the rich acid soil of stream banks. Native throughout eastern United States.

Cinnamon Fern

Clubmoss

35c ea.

A beautiful fern ally growing naturally from Canada to the Carolinas. Enjoys the cool shade of woods along streams and bogs. Is rather difficult to transplant.

Clubmoss

Hay-scented Fern

35c ea.

Dainty, lace-like fronds. Spreads rapidly with root runners, should not be planted in limited areas. Excellent for ground cover on open, sunny banks, which it prefers. Native of eastern United States.

Hay-scented Fern

Interrupted Fern

50c ea.

Grows 2½ to 3 feet in height. Interesting because it bears its dark brown spores on separate, small branchlets along the central part of the frond stem. Prefers the deep, rich soil of the woods along stream banks, grows in eastern United States.

Interrupted Fern

Lady Fern, Northern

35c ea.

This handsome fern seeks the rich soil of the deep wood and should not be planted in the open sun. It grows naturally from Canada to southern Pennsylvania and westward to Missouri.

Northern Lady Fern

Nursery Grown Native Ferns

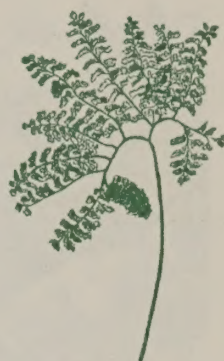

New York Fern

Maidenhair Fern

45c ea.

The daintiest and probably the most popular of all native fern. Prefers the deep, rich soil of the dense woods. Native throughout eastern United States to Georgia and Louisiana.

Maidenhair Fern

New York Fern

35c ea.

This dainty fern likes acid soil, wet woods, and shady bogs. Valuable ground cover. Spreads with root runners. Grows naturally from Canada to Georgia.

Polypody

Ostrich Fern

50c ea.

This tall, vigorously growing fern likes the deep, rich soil of wooded bottom lands, growing naturally from Canada to Virginia and westward to Alaska. Generally, it prefers shade, though it sometimes grows in the open sun, but in these cases usually the fronds brown early in the season.

Ostrich Fern

Polypody

35c ea.

Great mats of this beautiful fern grow luxuriantly over huge rocks or on steep banks. Prefers shade and grows naturally from Canada to Georgia.

Royal Fern

50c ea.

The most graceful of all the large ferns flourishes in moist, acid soil. Native of eastern Canada, United States, and South America.

Sensitive Fern

Sensitive Fern

35c ea.

This handsome, showy fern should never be planted in a limited space because it spreads rapidly with root runners. However, it may be beautifully used along stream banks or in bogs where there is considerable area to cover. Native throughout eastern United States.

Royal Fern

Spleenwort, Ebony

35c ea.

Dainty small fern, extremely hardy, very useful where space is limited, prefers the shade of a limestone section, grows naturally from Pennsylvania to Florida.

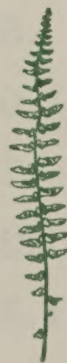

Marginal Woodfern

Woodfern, Evergreen; Marginal Woodfern; Leatherwood Fern

35c ea.

This beautiful and extremely popular fern retains its fronds well on into the cold weather. Prefers rich woodland slopes from Canada to Alabama and westward to Missouri.

Ebony Spleenwort

Naturalistic Landscaping is truly a specialty — a specialty which requires ability, artistry and quality workmanship. It is important to have a close understanding of what actually is most fitting for your own garden. There is a warm relationship between well planted grounds and your type of home in its particular setting.

A garden that is yours and really yours should have your taste of individuality in it somewhere. We cooperate with you one hundred percent in working out a favorable and interesting plan which will be a joy, yet different.

Natural gardens actually have great simplicity. They require but minimum maintenance. Such gardens are executed with the idea of an all year round harmony in mind, breaks the monotony and gives you something interesting to look forward to as the seasons approach. Gardens of this type are developed by appropriations which meet your budget.

The work of VICK'S WILDGARDENS INC. is known throughout the eastern United States. Our objective on your property is to plan and create with you a real effect for your long-lasting enjoyment.

When plants are purchased or work is to be done by Vick's Wildgardens, Inc., we offer you a free consultation (within a 25 mile radius) regarding your property improvement and beautification.

Expense charges are made where distance travel is involved.

Nominal charges are made for those who desire only our technical and horticultural advice.

It will be a pleasure to help you obtain the garden you have always dreamed about.
